Using MAXHUB screens

Simply tap the screen
to wake up the system

All screens are programmed to power on automatically at 08:30 and off at 19:15. Outside of these hours, press the on-off button in the bottom centre of the surround for 2-3 seconds. The system is ready to use when the two big icons for Whiteboard and Meeting appear.

USB-C connection

Each room has a MAXHUB USB-C dongle (see right). Connect the dongle to your laptop's USB-C port. The dongle's light should flash and then stay solid after a few seconds. Now press the centre of the dongle (where it says 'MAXHUB') and your laptop screen should then appear wirelessly on the big display screen. Audio is also transmitted by the dongle. When you've finished, simply disconnect the dongle and return to its caddy.

HDMI connection

There is an HDMI wall port near to the MAXHUB screen with a tethered HDMI cable attached. After waking up the screen (if necessary) simply plug the HDMI cable into your laptop. The screen should auto-sense the input and display it, along with any audio. There is no remote control for the screen – you do not need to select an input channel, etc.

? My laptop doesn't have a USB-C or HDMI port

Contact the IT Department who may be able to lend you an adapter: ithelpdesk@worc.ox.ac.uk

I want to adjust the volume

Use the volume control on your laptop. If that's not enough, the screen's controls can be accessed by tapping the ► icon on the middle left or middle right of the screen. This will produce a volume slider on the screen which can be moved up or down.
